## **ABSTRACT**

Klandasan Ulu Village has experienced quite rapid population growth than before. With population growth, the need for housing continues to increase, causing the demand for houses to increase. Along with this development, the phenomenon of informal settlements has emerged, one of which is living on water. With its position as a water settlement, regional development will have an impact on the social and economic life of the community. Problems with water settlement areas sometimes tend to be in the form of increasing population while the social and economic conditions of the community are less developed. In this research there is a development concept which is carried out by analyzing the influence of regional development on social and economic aspects using qualitative descriptive analysis. The results of the analysis in this research show that there are sub-variables that have an effect and those that have no effect. This analysis was carried out in order to create housing conditions and residential areas that are more conducive to the continuity of the economic life of the community in water settlements in Klandasan Ulu Village. So this is the background for researchers in conducting research entitled "The Effect of Development of Residential Areas on Water in Supporting Social and Economic Life"

**Keywords: Regional Development, Social, Economy**
